## Job Costing Module

Available within CaptureIT is a powerful job-costing module. This provides facilities for recording the time employees spend on any number of jobs (and up to 999 operations within the job). CaptureIT was developed from day one to be capable of handling true job costing.

The screenshot shows a software window titled "Jobs [9912] [Read Only]". It has several tabs: "General", "Sequences", "Custom Fields", and "Employees Working On This Job". Below the tabs is a toolbar with icons for "View Detail", "Memo Text", "Insert", "Delete", "Clear Costs", and "Print". The main area contains a table with the following data:

Seq	Cost Centre	Code	Terminal Display	Pay Rate	Budget Cost	Budget Mins	Actual Cost	Actual Mins
1	Cost Centre 1	1	Preparation		270.00	3400	277.58	3459.10
2	Cost Centre 2	2	Cut		9.30	124	9.56	122.80
3	Cost Centre 3	3	File		9.77	130	8.58	100.52
4	Finishing	F1	Spray Paint		12.20	136		
5	Finishing	F1	Drying		13.01	145		
6	Finishing	F1	Inspection		8.98	100		
7	Packing Room	P1	Pack		7.80	104		

Some features that make CaptureIT Job Labour Costing stand out from its competitors are:

- Real time validation of employee's job claims, ensuring they do not take non active jobs.
- True management by exception, be informed as and when parameters aren't adhered to
- The ability to handle an unlimited number of job/sequence changes per employee, per day.
- To-the-second accuracy of all transactions.
- Real time visibility of work in progress
- Real time over budget exception notifications by email
- Data exchange with third party ERP/MRP solutions
- Ability to record breaks and activity changes whilst working on jobs with correct costs being applied
- Support for 'quantity claiming' at the terminal with piecework payments.
- The ability to handle large numbers of data collection terminals enabling each employee to have their own terminal if required.
- Monitoring of employee productivity and efficiency, with exception reporting.
- Track back historically to see who worked on which job when.
- Barcode job sheets created within CaptureIT

## Data Capture Hardware

The Microcap terminal is a low cost solution, for all data capture requirements. The Microcap is a low-cost terminal, making it ideal for use with CaptureIT Job Costing and real-time production control - where a large number of terminals may be required.

The Microcap can be laid flat on a bench or desk, or wall mounted. It has an interface for an optional barcode wand or swipe reader. Microcaps are proprietary cabled in a daisy chain back to a line driver.
